Notes:
 Scientific nomenclature follows Bailey and Bailey (1976) for ornamentals, Hickman (1993) for natives, and Skinner and Pavlik (1994) for special-status species.
 An * indicates non-native taxa that have become naturalized or persist without cultivation.
 An * indicates ornamental or agricultural plant species that are actively cultivated.
 Common names follow Abrams and Ferris (1960), Bailey and Bailey (1976) for ornamentals, and Hickman (1993), Niehaus and Ripper (1976), and DeGarmo (1980) for natives.
 Synonyms in parentheses for scientific and common names are preferred.

Wetland indicator status (Reed 1988)	Growth Habit
OBL = obligate wetland species, occurs almost always in wetlands (>99% probability)	AG = annual grass
FACW = facultative wetland species, usually found in wetlands (67-99% probability)	AH = annual herb
FAC = facultative species, equally likely to occur in wetlands or nonwetlands (34-67% probability)	PG = perennial grass
FACU = facultative upland species, usually occur in nonwetlands (67-99% probability)	PH = perennial herb
NI = no indicator has been assigned due to a lack of information to determine indicator status	PV = perennial vine
* = a tentative assignment to that indicator status by Reed (1988)	S = shrub
NL (abbreviated for not listed) indicates that no wetland indicator status has been given in Reed (1988)	T = tree
Brackets around an indicator status indicates the wetland status as suggested by Dr. Brent Helm based on extensive field observations
