What is Public Health Accreditation?

• The measurement of health department performance against a set of nationally recognized, practice-focused and evidenced-based standards.

• The issuance of recognition of achievement of accreditation within a specified time frame by a nationally recognized entity.

• The continual development, revision, and distribution of public health standards.

What are the benefits?

 Nearly 80 percent of health departments that have had their PHAB site visit strongly agree – and the remaining health departments all agree – that "Going through the accreditation process has improved the performance of our health department."

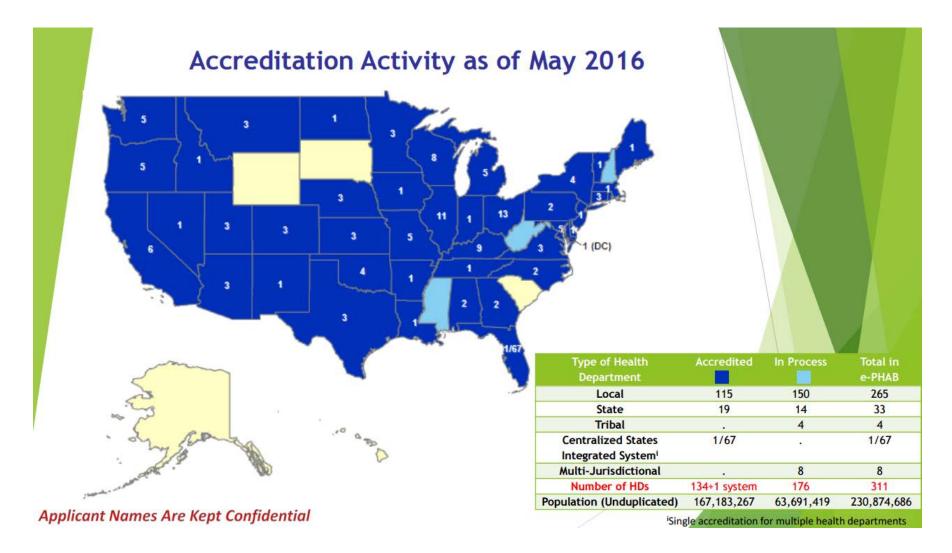

To learn more about the benefits, check out this video which features 3 accredited health departments including CDPH. Among health departments that have been accredited for one year, more than 95 percent report that accreditation has: *

•Stimulated quality and performance improvement opportunities

- •Allowed the health department to better identify strengths and weaknesses
- Improved management processes
- Stimulated greater accountability and transparency within the health department
- •Allowed the health department to document its capacity to deliver the three core functions and Ten Essential Public Health Services.

*From NORC at the University of Chicago evaluation survey of 28 health departments that have been accredited for one year. Read more about the <u>NORC evaluation</u>.

Who else is Accredited?

Where are we at in the process?
