<b>Vulnerability</b>	Summary	
District Name System Name Source Name	District No County System No Source No PS Code:	
Completed by	Date	
THE FOLLOWING I	INFORMATION MUST BE INCLUDED IN THE SYSTEM CONSUMER CONFIDEN	CE REPORT
A source water ass	ssessment was conducted for the source name system name water system in month, year	of the
The source is consthe water supply:	nsidered most vulnerable to the following activities associated with contaminal PCA1 PCA2 PCA3 Etc.	ints detected in
The source is conscontaminants:	PCA1 PCA2 PCA3 Etc.	etected

#### **Discussion of Vulnerability**

In this section, provide more information on the source's vulnerability to contamination.

• If there are no detected contaminants, use this language or similar:

"There have been no contaminants detected in the water supply, however the source is still considered vulnerable to activities located near the drinking water source."

In addition, you may include a description of actions that the water system is taking to protect the water supply.

• If there are detected contaminants, use this language or similar:

"Describe the detected contaminants and the PCAs with which they are associated. If the detected contaminants cannot be associated with a detected contaminant, explain this. In addition, provide additional information such as:

- Elaboration on PCAs ...
- Description of mitigating information ...
- Actions that the water system is taking ..."

## Specific methods follow on next page

GW5 Delineation.doc Page 1

### **Calculated Fixed Radius Delineation Method (Default)**

Using the equation presented above, calculate the size of zones for the appropriate aquifer setting of the source.

#### **Porous Media Aquifer**

Zone A	(2 year TOT)	$R_2 = _{-}$	ft, minimum = 600 ft —use larger:	ft
Zone B5	(5 year TOT)	$R_5 = _{\_}$	ft, minimum = 1,000 ft—use larger:	ft
Zone B10	(10 year TOT)	$R_{10} = _{-}$	ft, minimum = 1,500 ft—use larger:	ft

#### **Fractured Rock Aquifer**

(Increase size of zones by 50%)

```
Zone A (2 year TOT) 1.5R_2 = _____ft, minimum = 900 ft—use larger: _____ft Zone B5 (5 year TOT) 1.5R_5 = _____ft, minimum = 1,500 ft—use larger: _____ft Zone B10 (10 year TOT) 1.5R_{10} = _____ft, minimum = 2,250 ft—use larger: _____ft
```

### **Modified Calculated Fixed Radius Delineation Method**

In porous media aquifers, if the direction of ground water flow is known (see Section 6.2.3), the default zone circle may be shifted upgradient by  $0.5R_t$ . The upgradient and downgradient limits of the zone are determined below.

## **Zone A** (2-year TOT)

### **Zone B5** (5-year TOT)

```
upgradient distance = 1.5R_5 = _____ft, minimum = 1,500 ft, use larger: _____ft downgradient distance = 0.5R_5 = _____ft, minimum = 500 ft, use larger: _____ft
```

### **Zone B10** (10-year TOT)

```
upgradient distance = 1.5R_{10} = _____ft, minimum = 2,250 ft, use larger: _____ft downgradient distance = 0.5R_{10} = _____ft, minimum = 750 ft, use larger: ______ft
```

Physical Barrier Effectiveness Checklist - Ground Water Source					
District Name System Name Source Name	District No Source No	County			
Completed by	Date				

Use the DHS Well Data Sheet (separate document) to complete the following form.

#### Directions:

- Read through the form and collect the information needed to complete the form.
   (Hydrogeology, Soils, Presence of abandoned or improperly destroyed wells, Well construction and operation.)
- 2. Determine Parameter A, Type of Aquifer.
  - If the aquifer is confined, use the right-hand column, and evaluate only the parameters indicated for confined aquifers.
  - If the aquifer is unconfined, semi-confined, or the degree of confinement is unknown, or if the aquifer is fractured rock, use the left-hand column and evaluate only the parameters for unconfined aquifers.
- 3. For each parameter appropriate for the source, place a check in the box for the answer that most closely applies to that source. If more than one answer is possible, select the more conservative (i.e. lower points) answer. [For example, if the depth to static water (Parameter D) has varied between 45 and 55 feet, choose answer 2 (20 to 50 feet).]
- 4. Add the points in the column appropriate for the source and interpret the score as shown on the bottom of the last page.
  - Determine whether the source has a High, Moderate or Low Physical Barrier Effectiveness. Use this in the Vulnerability analysis. The higher the points, generally the more effective the source and site are to retarding the movement of contaminants to the water supply.

NOTE: If the source is located in fractured rock the source is considered to have a Low Physical Barrier Effectiveness, regardless of the point total. So, if Parameter B, Aquifer Material is 3, the remainder of the form does not need to be completed.

Physical Barrier Effectiveness (PBE) – Ground Water, page 1 of 2

 Source No.:

 PARAMETER
 POINTS

A. TYPE OF AQUIFER Confinement (up to 50 points maximum) choose one  a. Unconfined, Semi-confined, Fractured Rock, Unknown b. Confined  B. AQUIFER MATERIAL (Unconfined Aquifer) Type of materials within the aquifer (up to 20 points maximum) choose one  1. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A  2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A  2. Porous Media (Interbedded sands, silts, clays, and gravels)  3. Fractured rock * (* Low Physical Barrier Effectiveness - no further questions required)  C. PATHWAYS OF CONTAMINATION (All Aquifers) Presence of Abandoned or Improperly Destroyed Wells (up to 10 points maximum)  1. Are they present within Zone A (2-year time of travel (TOT) distance)?  a. Yes or unknown  b. No  2. Are they present within Zone B5 (2- to 5-year TOT distance)?  a. Yes or unknown  b. No  3. Are they present within Zone B10 (5- to 10-year TOT distance)?  a. Yes or unknown  b. No  2. Yes or unknown  c. No  D. STATIC WATER CONDITIONS (Unconfined Aquifer) Depth to static Water (DTW) = feet (up to 10 points maximum) choose one  1. 0 to 20 feet  2. 20 to 50 feet  3. 50 to 100 feet  4. > 100 feet  E. WELL OPERATION (Unconfined Aquifer) Depth to Uppermost Perforations (DUP) DUP = feet (up to 10 points maximum) choose one  1. (DUP – DTW) / (Q/H)] = (up to 10 points maximum) choose one  1. (DUP – DTW) / (Q/H)] = (up to 10 points maximum) choose one	PARAMETER		POINTS		
Confinement   (up to 50 points maximum)   choose one   a. Unconfined, Semi-confined, Fractured Rock, Unknown   D.   Confined   So   D.   Confined   Confi		Unconfi			ed
a. Unconfined, Semi-confined, Fractured Rock, Unknown b. Confined B. AQUIFER MATERIAL (Unconfined Aquifer) Type of materials within the aquifer (up to 20 points maximum) choose one  1. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A 2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A 2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A 2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A 2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A 2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A 2. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer and silts, clays, gravels) with continuous clay layer silts, clays, gravels) with continuous clay layer and silts, clays, gravels) with continuous clay layer silts, clays, gravels) with continuous clayers on Authority					
b. Confined  B. AQUIFER MATERIAL (Unconfined Aquifer) Type of materials within the aquifer (up to 20 points maximum) choose one  1. Porous Media (Interbedded sands, silts, clays, gravels) with continuous clay layer minimum 25' thick above water table within Zone A  2. Porous Media (Interbedded sands, silts, clays, and gravels)  3. Fractured rock *  (* Low Physical Barrier Effectiveness - no further questions required)  C. PATHWAYS OF CONTAMINATION (All Aquifers) Presence of Abandoned or Improperly Destroyed Wells (up to 10 points maximum)  1. Are they present within Zone A (2-year time of travel (TOT) distance)?  a. Physical Barrier Effectiveness – Ground Water, page 2 of 2

Source Name: Source No.

PARAMETER		POII	VTS	_
	Unconfir	ned	Confin	ed
F. HYDRAULIC HEAD (Confined Aquifer) What is the relationship in hydraulic head between the confined aquifer and the overlying unconfined aquifer? (i.e. does the well flow under artesian conditions?) (up to 20 points maximum) choose one				
head in confined aquifer is higher than head in unconfined aquifer     under all conditions			20	
head in confined aquifer is higher than head in unconfined aquifer under static conditions			10	
<ol> <li>head in confined aquifer is lower than or same as head in unconfined aquifer</li> </ol>			0	
4. unknown			0	
G. WELL CONSTRUCTION (All Aquifers)  1. Sanitary Seal (Annular Seal) Depth = feet  (up to 10 points maximum) choose one  a. None or less than 20 feet deep	0		0	
b. 20 to 50 ft deep	6		10	
· · · · · · · · · · · · · · · · · · ·	10		10	
c. 50 ft or greater	10		10	
Surface seal (concrete cap) (up to 4 points maximum) choose one     a. Not present or improperly constructed	0		0	
b. Watertight, slopes away from well, at least 2' laterally in all directions	4		4	
3. Flooding potential at well site (up to 1 point maximum) choose one				
<ul> <li>a. Subject to localized flooding (i.e. in low area or unsealed pit or vault) or Within 100 year flood plain</li> </ul>	0		0	
b. Not subject to flooding	1		1	
4. Security at well site (up to 5 points maximum) choose one				
a. Not secure	0		0	
b. Secure (i.e. housing, fencing, etc.)	5		5

Maximum Points Possible	70		100	
POINT TOTAL FOR THIS SOURCE				

## **Physical Barrier Effectiveness SCORE INTERPRETATION**

Point Total	<u>E1</u>	<u>ffectiveness</u>
0 to 35 =	Low	(includes all sources in Fractured Rock)
36 to 69 =	Modera	ite
70 to 100 =	High	

District Name System Name			System No
Source Name		O M .	PS Code:
Completed by	-	Date	
	CA tables that will be used 'Other" checklist and at lea	•	r source (assessment must g three checklists):
	Commercial/Industrial		
	Residential/Municipal		
	Agricultural/Rural		
	Other (required for all)		

Proceed to appropriate checklist or checklists. Indicate whether the PCA is located in the zone by placing a Y (yes), N (no), or U (unknown) in the appropriate boxes. Example:

Zone A	Zone B5	Zone B10
Υ	N	Ν
N	Y	U
U	N	N

Risk Ranking of PCAs, where VH = Very High Risk, H = High Risk, M = Moderate Risk, L = Low Risk

Medical/dental offices/clinics (L)				
Veterinary offices/clinics (L)				
Surface water - streams/ lakes/rivers (L)				
Wells - monitoring, test holes (L)				

#### **Vulnerability Ranking – Ground Water**

Download the "Vulnerability Ranking List" from the DHS website. Follow these directions for using the spreadsheet.

#### General Notes:

The list in the spreadsheet (GW Vulnerability Ranking List.xls, sheet "GW") comes from the PCA checklists. Each PCA is listed four (4) times: Zone A, Zone B5, Zone B10, and Unknown.

PCA risk points (Column C) have been assigned based on the risk of the PCA (VH, H, M, or L) for that zone.

To use the Vulnerability Ranking Spreadsheet follow these steps:

- 1. Conduct the PCA inventory.
- 2. Make a copy of the spreadsheet "GW" and give the new sheet a descriptive name.
- 3. On the new sheet, delete rows for any PCAs that do not exist in any of the zones. (Remember that each PCA is listed 4 times).
- 4. Delete rows for PCAs that don't occur in a particular zone (i.e. if the PCA exists only in Zone A, delete the rows for Zone B5, B10 and Unknown).
- 5. For PCAs whose existence is unknown, delete the appropriate rows (i.e. if you have no idea whether the PCA exists, keep the Unknown row and delete the other three. Similarly, if you know the PCA exists in Zone A but you aren't sure about B5 and B10, delete the rows for B5 and B10 and keep the rows for Zone A and Unknown.)
- 6. The remaining rows should represent all of the PCAs that exist or whose existence is unknown within the zones. (For some sources, especially in urban areas, this may still be a very long list.)
- 7. Calculate Physical Barrier Effectiveness for the source. Insert the corresponding points (i.e., H = 1, M = 3, L = 5) into column E for all the rows.
- 8. Determine the Vulnerability Score in Column F (sum of columns C + D + E)
- 9. Sort the list by the Vulnerability Score, from highest to lowest.
- 10. The source is considered vulnerable to all PCAs with vulnerability score  $\geq$  8. Shade these yellow.
- 11. Review the list. This is a good time to review the assessment with the water supplier. Items to consider:
  - a. Are there detected contaminants in the source water? What are the PCAs associated with the contaminants? Are those PCAs at the top of the list? If not, move them there with a note or asterisk.

- b. What were the perceived biggest problems before doing the assessment? Are these PCAs at the top of the list? Should they be?
- c. Are there PCAs at the top of the list that don't seem particularly important?
- 12. If there are any concerns with the vulnerability ranking, go back and review the PCA inventory. Revise the inventory as necessary.
- 13. Revise the vulnerability ranking as necessary.
- 14. Print the final list, save to disk, and submit with the remainder of the assessment.

#### **Instructions for Groundwater Assessment Map**

The assessment map for a groundwater source should be submitted on USGS topographic maps ("quad maps") at 1:24,000 scale. The map should show:

- Location of the source
- Protection Zones
- Significant Possible Contaminating Activities (PCAs) within the zone (optional, but recommended)

The protection zone for groundwater sources are a set of three circles surrounding the source. (For springs and horizontal wells, if determined to be groundwater sources, the protection zones need not include those portions of the circles down gradient of the source.) The radius of the protection zone is determined in the Delineation section of the assessment and depends upon the aquifer material, well pumping rate, screened interval, and aquifer porosity.

USGS quad maps may be obtained from map or backpacking retailers. There are also several computer software programs that include USGS quad maps.

At the discretion of the regulatory agency, the water system may request that the regulatory agency prepare a map displaying the source and zones.

Example maps for a well source and a spring source are attached.
