See next page for course descriptions, site locations, and enrollment information.

Environmental Compliance Course Descriptions

Hazardous Waste Management for the Auto Industry: This 2-hour training program covers waste identification and management procedures for hazardous waste typically generated in the automotive repair industry.

DOT & Hazardous Waste Manifest: This is an 8-hour course for employees who are responsible for preparing and/or signing manifests for hazardous waste shipments. Training covers identification of the DOT hazard classes and divisions, use of the DOT Haz Mat table, selection of appropriate shipping names, and proper packaging, marking, labeling, and placarding for DOT regulated waste shipments. The course also covers the completion, distribution, and retention of the Uniform Hazardous Waste Manifest for RCRA and non-RCRA hazardous waste.

Hazardous Materials Business Plans / CERS: This 2-hour program covers applicability, completion, submittal, and employee training requirements for facilities that are required to prepare a Hazardous Materials Business Plan because they store hazardous materials at their facility. The program includes navigating and using the California Environmental Reporting System (CERS).

Basic Hazardous Waste Management: This 4-hour course provides a general overview of the basics of hazardous waste management for California hazardous waste generators. Training covers waste identification, container and tank management requirements for Large and Small Quantity Generators, basic hazardous waste shipping requirements, and the management of contaminated containers and universal waste.

Advanced Hazardous Waste Management: This 8-hour training program expands on the Basic training. In addition to topics covered in the Basic training this class covers recordkeeping requirements related to hazardous waste, in-depth waste identification and classification, land disposal restrictions, and in-depth tiered permitting requirements for waste treatment.

SPCC Plans for APSA Sites: This is a 2-hour course that highlights the state statutes for facilities that store >1,320 gallons of petroleum products (fuels, oils, solvents, etc.) in aboveground tanks. Training covers regulated facilities and materials, Spill Prevention Control and Countermeasure Plans, recordkeeping, and training requirements.

Universal Waste Management: This 2-hour program covers identification of Universal Waste, spill response, and proper storage, labeling, shipping, recycling, and recordkeeping requirements.
