

December 15, 2015 Board of Supervisors Meeting

At the December 15, 2015 Board of Supervisors meeting the Board of Supervisors received the Rumsey Bridge Final Feasibility Study and selected the replacement strategy. The agenda item and attachments are located [here](#)

The strategy selected by the Board of Supervisors is Alternative 3, a cast-in-place concrete box girder bridge, to be installed on a new alignment upstream of the existing bridge. The existing bridge would be utilized during construction to provide access across the creek, and would be removed following construction. Quincy Engineering and their consultants are proceeding with the environmental, historical, and archeological studies necessary to complete the environmental process for the project. Caltrans is the lead agency for National Environmental Policy Act clearance needed for this federally funded project.
