

COUNTY OF YOLO

Health and Human Services Agency

Karen Larsen, LMFT
Director

MAILING ADDRESS
137 N. Cottonwood Street • Woodland, CA 95695
www.yolocounty.org

Attention: Yolo County Resident

You are receiving this because you are testing/were recently tested for COVID-19 in Yolo County. Due to the high volume of people being tested across California, your test result may not be available for several days. This letter provides instructions on what to do while you are waiting for your test results. The instructions depend on whether you have symptoms of COVID-19 and whether you have been exposed to someone with COVID-19.

If you have symptoms of coronavirus (fever, cough, difficulty breathing, headache, body aches, fatigue, sore throat, nasal congestion or runny nose, loss of taste or smell, nausea, vomiting, or diarrhea):

1. STAY HOME and away from other people in your household until you receive your test result.
2. Wear a face covering at home if you can't stay 6 feet away from people you live with.
3. DO NOT go to work, run errands, or visit in-person with others.
4. Follow these isolation instructions: www.yolocounty.org/Home/ShowDocument?id=65210

If you don't have symptoms but you know you have been exposed to someone with coronavirus:

1. STAY HOME and away from other people in your household until you receive your test result.
2. Wear a face covering at home if you can't stay 6 feet away from people you live with.
3. DO NOT go to work, run errands, or visit in-person with others.
4. Follow these quarantine instructions: www.yolocounty.org/Home/ShowDocument?id=65214
5. If you were within 6 feet of an infected person for 15 cumulative minutes or more within 24 hours or came into contact with their secretions (coughed on, kissed, shared food or drink, or similar), you may stop quarantining after 10 days from the date of your last exposure without testing. You should continue to monitor yourself for symptoms until 14 days after your exposure. If a COVID-19 test collected on Day 5 or later after your exposure is negative, you can return to work after completing 7 days of quarantine (last day of exposure is Day 0 and you can return to work on Day 8).
6. If your test result comes back negative but you developed symptoms since you got tested, you need to get tested again. A negative test only means that you were not infected at the time you were tested; it does not mean that you aren't infected now.

If you don't have symptoms and don't have any known exposures to someone with coronavirus, you do not need to stay home while waiting for your test result.

1. You should take your temperature and monitor yourself for symptoms every day.
2. If you develop any symptoms, STAY HOME.
3. If your test result comes back negative but you developed symptoms after you got tested, you need to get tested again. A negative test only means that you were not infected at the time you were tested; it does not mean that you aren't infected now.

If you test positive and you live in Yolo County, Yolo County Public Health may try to contact you. Please return their phone call if they leave you a message. Due to delayed reporting by labs and the large volume of positive tests to follow up on, Public Health may not be able to contact you quickly after you receive your test result. You should still isolate and follow the instructions above.

To Whom It May Concern:

The Yolo County Health and Human Services Agency does not provide individualized clearance letters for those returning to work following COVID-19 infection. If requested by an employer, employees should self-attest that they meet criteria for returning to work using this form.

Please note that the County does not receive completed forms and cannot verify the accuracy of any information provided by an employee. Employers should perform any inquiries reasonably required to ensure that the self-attestation has been completed in a truthful and accurate manner.

Sincerely,

Aimee Sisson, MD, MPH
Public Health Officer

First responders and healthcare workers should follow their workplace protocol for returning to work.

All other workers should use the following criteria for returning to work following COVID-19 infection:

- **Persons with symptoms*** may return to work:
 - 10 days after symptoms first appeared, **and**
 - Symptoms have improved**, **and**
 - At least 24 hours have passed with no fever without use of fever-reducing medication.
- **Persons without symptoms** may return to work:
 - 10 days after specimen collection date of first positive COVID-19 laboratory test.

I, _____, verify that I have met the Yolo County Health and Human Services Agency criteria listed above for returning to work. **In signing below, I certify that this verification is true and accurate in all respects.**

Date

*Symptoms of COVID-19 may include fever, chills, cough, shortness of breath or difficulty breathing, sore throat, muscle or body aches, runny nose or congestion, new loss of taste or smell, nausea, vomiting, or diarrhea.

**Loss of taste and smell may persist for weeks or months after recovery and need not delay return to work.

Instructions for Home Quarantine and Health Monitoring

For close contacts/household members

Even though you may not feel sick, you must remain quarantined at home since you've had close contact with someone with known COVID-19. Quarantine is a way to prevent the spread of the virus to more people. You will need to stay home and monitor yourself for any signs of illness.

During your quarantine period, follow these instructions:

1. Stay in your home.
2. Do not go to work or school.
3. Do not go to the grocery store or run other errands (e.g. going to the pharmacy) unless it is absolutely necessary. Please have family members or friends run errands and drop off items at your doorstep.
4. Do not have visitors during the quarantine period.
5. Wash your hands frequently with soap and water, especially after coughing, sneezing, blowing your nose, going to the bathroom, or having direct contact with moist materials such as tissue and used face coverings. Hand sanitizer with more than 60% alcohol can also be used instead of soap and water.
6. Cover your mouth and nose with tissue when you sneeze or cough. Immediately wash your hands with soap and water afterwards.
7. Do not share toothbrushes, food, drinks, or eating utensils.

Monitor your health:

- Monitor yourself for symptoms. Symptoms of COVID-19 include fever, chills, fatigue, headache, sore throat, muscle or body aches, cough, shortness of breath, runny or stuffy nose, loss of taste or smell, nausea, vomiting, or diarrhea.
- If you start to feel sick, please contact your healthcare provider and let them know you have had contact with someone who has tested positive for COVID-19. If you have mild symptoms, your healthcare provider will most likely advise you to take care of yourself at home as you would with any other mild cold or flu.

When does quarantine end:

- If you do not live with someone who has COVID-19, your quarantine will end after 10 days from last exposure to the known COVID-19 positive individual.
- If you live with someone who has COVID-19 and you can't quarantine in your own bedroom and bathroom, you will need to be quarantined for 10 days after your household member no longer needs to be isolated.
- You can shorten your quarantine to 7 days if a COVID-19 test collected on Day 5 or later is negative. The last day of your exposure is Day 0 and you can resume normal activities on Day 8.

If you have any concerns or questions, please call your primary care doctor first, then the Public Health COVID Line at: (530) 666-8614 during normal business hours (Mon - Fri 8:00 AM—5:00 PM).

Instructions for Home Isolation and Health Monitoring

For people with COVID-19

You have tested positive for COVID-19. You will need to stay in your home until you are well. This is called 'home isolation.' When you are able to leave your home depends on your symptoms.

If your employer requests confirmation that you have completed the isolation period, please complete and turn in to your employer the self-attestation form at: <https://bit.ly/EnglishAttestation>.

If you have symptoms, stay at home for at least 10 days after your symptoms began.

- If you still have symptoms after 10 days, continue to stay home until:
 - * your symptoms have improved, AND
 - * 24 hours after fever has gone away (without using a fever-reducing medication like Tylenol or ibuprofen)

If you tested positive, but did not have any symptoms at the time of testing:

- You should remain in isolation for 10 days from the date the test was performed.
 - * During this time, you should also monitor yourself for symptoms. If any symptoms develop during this time, you should remain in isolation as noted above.

The following are some steps you can take to help reduce the spread of COVID19 in your community and household.

- Protect the Public:
 - * Stay home except to see your doctor. Reschedule any non-essential healthcare appointments (non-urgent doctor's appointments, dentist appointments, etc.).
 - * Do not go to work or school.
 - * Do not use public transportation (like YoloBus, Taxi, UBER, Lyft)
 - * Do not travel.
 - * Do not gather or go to places where lots of people may gather.
 - * You can go outside in your own yard (not a shared yard).
- Protect Your Family:
 - * Stay in your own room. If you leave your room, wear a mask. Cover your coughs and sneezes.
 - * You and your family should wash hands frequently using soap and water for at least 20 seconds or use an alcohol-based hand sanitizer.

If you have any concerns or questions, please call your primary care doctor first. You can also call the Yolo County COVID-19 Response Operations Center Line at: (833) 965-6268 (833-YOLOCOV).

Resource Attainment List

For people that are in isolation or quarantine

Instructions for Deliveries

For people with COVID-19

While isolating or quarantining from COVID-19, there are several things precautions you can take to prevent your family from contracting the illness.

Tips for deliveries made by family, friends, businesses or restaurants:

- Designate space near your front door on your porch as a 'drop off' area. You can put an 'X' on the ground with chalk or tape or put out a large box to help identify this area.
- Put up a sign by this 'drop off' area letting people know this is where items should go. For example, you can write 'Drop Off Items Here' on a piece of paper.
- Ask that those delivering items to your house wear a face covering from the time they exit their car to the time they get back in their car.
- DO NOT open your door when the delivery is being made, no matter if it is your family or friend.
- Open the door after they have left or driven away.
- Wear a face covering when opening your door to gather items.
- Wipe down items if possible.

Reminders:

- You may infect other people while you are in isolation or quarantine, so it is important to limit as much contact as possible.
- Even with family and friends, do not let someone into your house or to open the door when they are still making the delivery.
- Limit deliveries as much as possible to those most necessary.
- If you want to talk to your family or friend while they are making the delivery, call or text them instead. Still do not open the door.
- If a business needs you to sign or pay for items, make sure you and the delivery person are both wearing a face covering before opening the door to sign or pay for items. Do not shake hands. Try to limit as much contact as possible by having them put the item in the designated area. Do not pick up the item until after they have left.
- The more you can limit the exposure to other people, the less likely they will get COVID-19 from you.

If you have any concerns or questions, please call your primary care doctor first. You can also call the Yolo County COVID-19 Response Operations Center Line at: (833) 965-6268 (833-YOLOCOV).

COVID-19 PREVENTION GUIDE

COVID-19 is still widespread in Yolo County and we have seen a huge rise in confirmed cases. Did you know that **you can be infected with COVID-19 and not show any symptoms and spread it without knowing** to your friends or family? Here are some prevention guidelines that can help protect the health of you, your family, and your community.

1 Gatherings increase risk.

At least half of Yolo County's recent cases have been due to social and family gatherings. Based on the CDC, the more people interact and the longer they interact, the higher the risk of getting and spreading COVID-19. The less you interact with others and share items and the more open space, the better.

2 Wear a face covering.

A face covering is mandatory in Yolo County and the State of California. The CDC says that cloth face coverings help to slow the spread of the virus and help people who may have the virus (and don't know it) from spreading it to other people. A face covering needs to fully cover your nose and mouth. Wash your face covering after each use.

3 Social distance.

If you are out in the public or interacting with other people, it's important to stay at least six (6) feet away from others. The CDC says that limiting face-to-face contact with others is the **BEST WAY** to reduce the spread of COVID-19, even if you or others do not have symptoms.

4 Practice good hygiene.

The CDC recommends that you:

- Wash your hands often with soap and water for at least twenty (20) seconds.
- Avoid touching your eyes, nose and mouth.
- Cover your cough and sneezes.
- Clean and disinfect high-touch surfaces.

5 Get tested.

If you have interacted with other people outside your household, testing is a good way to see if you have COVID-19. You can have COVID-19 even if you do not have symptoms. Testing also provides a more accurate picture of who's infected, how to prevent further spread and where to focus outreach efforts. For free testing call: (888) 634-1123 or visit: <https://lhi.care/covidtesting>.

For more information visit: www.yolocounty.org/coronavirus-roadmap

Yolo County Post-Vaccination Guidance

While mRNA COVID-19 vaccines have demonstrated high effectiveness in preventing severe and symptomatic COVID-19 cases, there is currently limited information on how much the vaccines might reduce transmission and how long protection lasts. At this time, vaccinated persons should continue to follow current guidance to protect themselves and others. However, vaccinated persons with an exposure to someone with suspected or confirmed COVID-19 are not required to quarantine if they meet certain criteria.

Current guidance for persons who are vaccinated:

1. Wear a mask that covers your nose and mouth and fits snugly against the sides of your face without gaps.
2. Maintain at least 6 feet of distance from those who you do not live with.
3. Frequently wash your hands with soap and water or use hand sanitizer.
4. Avoid crowds.
5. Avoid poorly ventilated spaces.
6. Cover your coughs and sneezes.
7. Follow CDC travel guidance.
8. Follow California Department of Public Health and Yolo County travel guidance, including guidance related to personal protective equipment use and SARS-CoV-2 testing.

Vaccinated persons who were exposed to someone with suspected or confirmed COVID-19 are not required to quarantine if they meet all of the following criteria:

1. Fully vaccinated (i.e., 2 or more weeks following receipt of the second vaccine dose in a 2-dose series, or 2 or more weeks following receipt of one dose of a single dose vaccine).
2. Within three months following receipt of the last dose in the series.
3. Have remained asymptomatic since the current COVID-19 exposure.

Persons who do not meet all three criteria should continue to follow current quarantine guidance after exposure to someone with suspected or confirmed COVID-19.

Monitor your health:

- Fully vaccinated persons who do not quarantine should still watch for symptoms of COVID-19 for 14 days following an exposure.
- If you experience symptoms, you should be clinically evaluated for COVID-19, including get a COVID-19 test.

If you have any concerns or questions, please call your primary care doctor first. You can also call the Yolo County COVID-19 Response Operations Center Line at: (833) 965-6268 (833-YOLOCOV).
