Population Growth and Estimated Deviations

The US Census has released in a "legacy format" the data from the decennial census, identifying the whole count of persons and where they resided as of April 1, 2020. Redistricting Partners has concluded the work of placing this data into the census blocks, block groups, and tracts.[1]

This data represents the whole population data prior to a state required reallocation of prison population that will be conducted by the Statewide Database at UC Berkeley. This adjusted data will be completed in the coming weeks and updated counts will be provided at that time.

Based on this data, the County has grown by 15,554 residents, or 7.7%, since the last decennial census. This is slightly higher than the state's population change of 6.1%.

---

[1] These counts are based on the 2020 Census geography. There may be slight differences as many census blocks were consolidated.

The largest population increase was seen in District 1, which gained 5,660 residents. All five districts saw an increase in population since the last decennial census.
