Agricultural Well Permit Application: Replacement Well or Well Modification

The following questions are to assist in the review of your well permit application as required by Executive Orders N-7-22 and N-3-23.

For REPLACEMENT or MODIFICATION of Existing Wells, please answer the following four (4) questions.

1. Please complete the table below with the location, well depth, diameter, screen intervals, and pumping capacity for the original well (the well to be replaced) and the replacement well.

	Well Depth (feet)	Casing Diameter (inches)	Screen Intervals	Pumping Capacity (gpm)	Longitude	Latitude
Original						
Proposed						

- a) Well Completion Report for the Original Well Provided? – please check the box. Y N *

***If no well completion report for the original well is provided, the applicant shall provide methodology or source on where the required information was obtained.**

- b) If the new replacement/modified well is deeper or larger in casing, provide a reason:

***Note:** To meet the definition of a replacement well, the new proposed well must have *similar construction and operational characteristics*, such as same or smaller casing size, similar well depth, screen intervals, and pumping capacity etc.

A production well that will increase the total groundwater pumping capacity will be reviewed under the “new well” category.

2. What is the reason for the well being replaced or modified?

3. Is a well abandonment application being submitted at the same time as the replacement well application?

Yes No, thus the replacement well application *cannot* be accepted.

4. Will the replacement well be located within **200'** of the well that it is replacing?

Yes No, thus it *does not* meet the definition of the replacement well and will be considered a new well.
